Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **yt-downloader.com** for a **Utility Web App / Multimedia SaaS** site, generated on October 19, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

91/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Missing security headers (CSP, HSTS, X-Content-Type-Options) in next.config.ts
2. **Info:** Missing llms.txt and llms-full.txt files for AI Search / LLM crawler discovery
3. **Info:** Preconnect to i.ytimg.com to optimize LCP on dynamic video thumbnail loading
4. **Info:** Add HowTo structured schema for the 3-step download workflow to capture rich snippets
5. **Info:** Explicitly configure AI crawlers (GPTBot, ClaudeBot, PerplexityBot) in robots.txt

Quick Wins:

1. Add security headers in next.config.ts (takes 5 mins)
2. Create public/llms.txt summarizing site tools for ChatGPT Search & Perplexity (takes 5 mins)
3. Add <link rel="preconnect" href="https://i.ytimg.com" /> in layout.tsx (takes 2 mins)
4. Add AggregateRating and HowTo schema in StructuredData.tsx (takes 10 mins)
5. Add MP4 vs WebM comparison guide on homepage to expand semantic keyword coverage (takes 15 mins)

2. Audit Categories

2.1 Technical SEO

Score: 92/100

What Works

- Clean dynamic XML sitemap at /sitemap.xml with daily/weekly change frequencies
- Proper robots.txt with disallow for /api/ and clear sitemap reference
- Self-referencing canonical links on every page to prevent duplicate content
- Zero crawl errors (all 7 core routes prerendered with HTTP 200 OK)
- Mobile viewport tag configured properly

Findings

Missing HTTP Security Headers Medium

next.config.ts does not send X-Frame-Options, X-Content-Type-Options, or Referrer-Policy headers.

Recommendation: Add a headers() block in next.config.ts returning secure default headers.

IndexNow Protocol Not Implemented Low

Bing and Yandex IndexNow protocol is not integrated for instant URL notification upon release.

Recommendation: Add /api/indexnow endpoint or static API key file for instant indexing notification.

2.2 On-Page SEO

Score: 94/100

What Works

- Unique, keyword-focused title tags within 50-60 character limits
- Compelling meta descriptions for all pages satisfying user search intent
- Single H1 tag per page hierarchy followed by structured H2/H3 headings
- OpenGraph and Twitter Card metadata configured across all pages
- Internal cross-linking between all downloader tools via Header, Footer, and RelatedTools

Findings

> **Homepage Deep Content Expansion** Medium
>
> While tool pages have explanatory sections, homepage can benefit from a detailed format comparison section.
>
> **Recommendation:** Add a comparison table on the homepage for video and audio formats.

2.3 Content Quality & E-E-A-T

Score: 88/100

What Works

- Direct utility above-the-fold without intrusive ads, paywalls, or forced logins
- Comprehensive, tool-specific FAQ accordions answering common user questions
- Dedicated transparency and trust pages (/privacy, /terms, /contact)
- Clear copyright and trademark disclaimers acknowledging YouTube's trademarks

Findings

> **Editorial Experience & Verification Signals** Low
>
> Content lacks explicit author or testing team credentials (e.g., 'Tested by our media engineering team').
>
> **Recommendation:** Add an about/engineering trust badge detailing yt-dlp version tracking and format verification.

2.4 Schema / Structured Data

Score: 95/100

What Works

- WebApplication schema with MultimediaApplication category and $0 free offer
- Organization and WebSite schema integrated with official logo and contact point
- BreadcrumbList schema on all pages
- FAQPage schema correctly mirroring visible FAQs on each tool page
- XSS protection escaping HTML characters in JSON-LD payloads

Findings

HowTo Schema Opportunity Medium

The 3-step 'From URL to download in seconds' is prime candidate for Google HowTo rich snippets.

Recommendation: Add HowTo JSON-LD schema to StructuredData.tsx.

AggregateRating on WebApplication Low

WebApplication schema does not include user satisfaction rating.

Recommendation: Add aggregateRating object with ratingValue and reviewCount.

2.5 Performance (CWV)

Score: 92/100

What Works

- Turbopack-optimized static rendering with zero heavy runtime UI libraries
- Next.js Inter font subsetting and Google Fonts preconnecting
- Lazy loaded thumbnails and clean SVG icons
- Clean client bundle with zero unnecessary dependencies

Findings

Preconnect to YouTube Thumbnail CDN Low

Dynamic thumbnails load from i.ytimg.com. Preconnecting reduces handshake latency.

Recommendation: Add <link rel="preconnect" href="https://i.ytimg.com" /> to root layout.

2.6 AI Search Readiness (GEO)

Score: 82/100

What Works

- High information density with concise definitions, bullet points, and Q&A
- Semantic HTML5 tags throughout layout (<header>, <nav>, <main>, <section>, <footer>)

Findings

Missing llms.txt and llms-full.txt High

AI engines (ChatGPT Search, Perplexity, Claude) index llms.txt for structured tool understanding.

Recommendation: Create public/llms.txt and public/llms-full.txt with clear markdown documentation of all tools.

Explicit AI Crawler Permissions Medium

robots.txt allows all crawlers via '*', but explicitly declaring GPTBot and ClaudeBot boosts crawl rate.

Recommendation: Add explicit allow rules for GPTBot, ClaudeBot, and PerplexityBot in robots.ts.

2.7 Images & Assets

Score: 90/100

What Works

- Standard multi-resolution icons (192x192, 512x512, apple-touch-icon)
- site.webmanifest for PWA and mobile bookmarking
- Dynamic alt tags on fetched video thumbnails

Findings

High-Resolution OG Image Low

Current og-image.png is basic. A dedicated 1200x630 banner improves CTR in social shares.

Recommendation: Generate an eye-catching 1200x630 branded card.

---

3. Action Plan

Phase 1: Quick Wins & AI Search Setup Day 1-2

- Create public/llms.txt for AI Search and LLM citability
- Add security headers in next.config.ts
- Add i.ytimg.com preconnect in layout.tsx
- Explicitly configure GPTBot & ClaudeBot in robots.ts

Phase 2: Schema Enhancements Week 1

- Add HowTo schema for 3-step download process
- Add AggregateRating to WebApplication schema

Phase 3: Content Depth Expansion Week 2

- Add comprehensive format guide table on homepage
- Add editorial engineering badges for trust & E-E-A-T

Phase 4: Monitoring & Off-Page Growth Ongoing

- Connect Google Search Console and Bing Webmaster Tools
- Monitor Core Web Vitals field data in CrUX
- Track keyword rankings for high-intent search terms

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
